Rehab Essence – Centre for Occupational Therapy

Tagline: *From Ability to Possibility*

Occupational Therapy & Neurorehabilitation for Children and Adults

At Rehab Essence, each child's program is designed and reviewed by me, and sessions are delivered by our trained therapists under my supervision. This model allows us to maintain consistency while ensuring every child gets the right expertise.

The Rehab Essence Integrated Team Approach

Every child's program at Rehab Essence follows a 3-step model:

- ❶ Initial assessment by Senior OT (Pallavi Bhat) with support therapists
 - ❷ Collaborative planning and goal-setting
 - ❸ Implementation by trained therapists under ongoing supervision
-

1. Homepage

Hero Section

Headline: 🌱 *From Ability to Possibility*

Subtext:

At Rehab Essence, we help children and adults reconnect with their potential — through science, compassion, and mindful rehabilitation.

Our therapy goes beyond improving skills — it's about rebuilding confidence, participation, and purpose — in body, mind, and daily life.

Buttons:

- *Book an Assessment*
- *Explore Paediatric Therapy*
- *Explore Adult Rehabilitation*

Visual Concept:

A bright, natural therapy space — a child exploring sensory play, an adult practising hand therapy, and a person engaging in mindfulness or cognitive retraining — symbolizing growth at every stage.

Quick Navigation

Who are you seeking therapy for?

For Children (Paediatric Therapy)

For Adults (Rehabilitation & Functional Recovery)

For Mental Health & Wellbeing

What We Offer

- *Occupational Therapy for Children & Adults*

 - *Serving **children, adults, and seniors** through personalized, goal-oriented, and compassionate care.*
 - *Available **in-person at St. Inez, Goa**, and **online across India**.*
-

Client Experiences

“She's one of the best occupational therapist I have ever met, we have done few sessions with her, as my 4 year old daughter has low attention and learning disability, i couldnt do more sessions with her as im out of Country but in those few sessions my daughter improved a lot. I wish I could do more sessions with her.”

2. About Us

Our Story

*Rehab Essence was born from the belief that true rehabilitation begins when therapy touches both the **body and the essence** of the individual.*

*Founded by **Pallavi Bhat** in **2022**, the clinic embodies her vision of transforming therapy into a journey of **connection, awareness, and empowerment**.*

Through her work across hospitals, community programs, and mental health rehabilitation, Pallavi witnessed how every client — from a child learning to hold a pencil to an adult recovering from stroke or emotional burnout — carries a story of possibility waiting to unfold.

*At Rehab Essence, **therapy meets mindfulness**, helping individuals restore balance, confidence, and meaning in their everyday life.*

Mission

To empower individuals to move, think, and live independently — turning every ability into a new possibility through holistic rehabilitation.

Vision

A compassionate world where therapy restores function, dignity, and balance — in body, mind, and daily life.

- **President, ICG Toastmasters Club, Goa (2025 term)**

- *Passionate advocate for **occupational balance, emotional regulation, and functional independence***
-

3. Services

A. Paediatric Therapy

Occupational Therapy for Children

Helping children gain confidence in movement, play, learning, and self-expression.

Focus Areas:

- *Sensory processing and emotional regulation*
- *Fine and gross motor skill development*
- *Handwriting and school readiness*
- *Play and social participation*
- *Feeding and self-care independence*

Signature Program:

 **Sensory Safari** — A 4-week group therapy experience for ages 4–8 that teaches children to calm, connect, and co-regulate through play and movement.

Functional Vision & Perceptual Therapy

Supporting children with reading, writing, and coordination challenges by strengthening visual–motor connections.

Parent Coaching & Home Programs

Structured guidance for parents to continue therapy goals at home with confidence.

B. Adult Therapy

Neurological & Cognitive Rehabilitation

For recovery after:

- *Stroke / Traumatic Brain Injury*
- *Parkinson's Disease / Dementia*

- *Neuromotor and balance impairments*

Goals:

- *Restoring daily living independence*
- *Cognitive retraining (memory, attention, executive function)*
- *Fine motor and hand function rehabilitation*
- *Emotional and occupational adjustment post-injury*

C. Mental Health Rehabilitation

Helping adults rebuild **function, structure, and self-identity** after challenges such as:

- *Depression, anxiety, or burnout*
- *Schizophrenia and bipolar disorder*
- *Emotional dysregulation or chronic stress*
- *Psychosocial adjustment issues*

Therapy Focus:

- *Developing daily structure, habits, and self-care routines*
- *Enhancing focus, motivation, and emotional regulation*
- *Building social participation and work readiness*
- *Mindfulness and body-based relaxation strategies*
- *Caregiver education and lifestyle planning*

Approach:

Combining **occupational engagement, psychosocial interventions, and mindfulness-based techniques** for holistic recovery.

D. Geriatric & Dementia Care

Gentle, structured, and family-inclusive sessions focusing on:

- *Memory stimulation and cognitive engagement*
- *Balance, coordination, and mobility*
- *Daily living skills and emotional wellbeing*
- *Caregiver guidance and environmental modifications*

E. Group & Community Programs

-  *Sensory Safari (Children 4–8 years)*
 - *Occupational Balance for Professionals Workshops*
 - *Mindful Movement & Senior Wellness Sessions*
 - *Mental Health Support Groups for emotional regulation and daily coping*
 - *Parent and Caregiver Support Circles*
-

4. How Therapy Works

1. Initial Consultation & Assessment

Understanding strengths, needs, and life goals.

2. Personalized Plan

Collaborative goal-setting that fits your lifestyle.

3. Therapy Sessions

Hands-on, play-based, or function-based sessions — tailored for neuro, physical, or mental health recovery.

4. Carryover at Home

Guided home programs and caregiver involvement.

5. Progress Review & Reassessment

Tracking improvements, adjusting goals, and celebrating milestones.

5. Resources & Blog

Empowering insights, practical tools, and inspiration for parents, adults, and caregivers.

Explore Our Resources:

- **My Book: Fix the Flip** — 30 worksheets to help children see letters the right way (worksheets and tips for handwriting improvement)
- **Instagram @theessenceofot** — videos and quick tips demonstrating exercises, sensory activities, and daily therapy strategies

*These resources are designed to help you **continue therapy at home**, stay informed, and engage with your child or loved one in practical, meaningful ways.*

6. FAQs

For Parents

1. What signs show my child needs Occupational Therapy (OT)?

If your child struggles with daily activities — like dressing, feeding, writing, sitting still, or playing with other kids — OT can help.

You might notice your child:

- *Is easily distracted or overly sensitive to sounds or touch*
- *Has trouble with balance, coordination, or handwriting*
- *Avoids messy play or dislikes certain clothes or textures*
- *Finds it hard to calm down or follow routines*
- *Needs extra help with daily activities (ADLs)*
- *Shows learning difficulties or poor attention span*

*Occupational Therapy helps children develop the skills they need to **feel confident, focused, and independent** in their everyday life.*

2. How often will my child need sessions?

The number of sessions depends on your child's needs and goals.

*Usually, children start with **1–2 sessions per week**, and as they improve, the frequency may reduce.*

Progress also depends on how regularly home activities are practiced. We'll always review and adjust the plan together so it fits your family's schedule and comfort.

3. Can I attend the sessions?

Yes, absolutely. Parents are welcome — and encouraged — to be part of the process. In some sessions, you may observe quietly; in others, you'll learn techniques to use at home.

Your involvement helps your child make faster progress because therapy continues beyond the clinic — into daily life.

4. What is Sensory Integration Therapy?

*Sensory Integration Therapy helps children who are **over- or under-sensitive** to things like sound, touch, movement, or light.*

*Through playful, movement-based activities (like swinging, balancing, or deep pressure games), children learn to **organize and respond to sensory input calmly**.*

This helps them focus better, manage emotions, and enjoy everyday experiences like school, play, and family time.

For Adults & Caregivers

1. Can Occupational Therapy help with memory loss or dementia?

*Yes. Occupational Therapy can make daily life easier and more meaningful for people with **memory loss or dementia**.*

We work on:

- *Simple routines to stay oriented and independent*
- *Cognitive exercises to keep the brain active*
- *Adapting the home to make it safer*
- *Supporting caregivers with stress management and practical guidance*
*The goal is to help both the person and the family maintain **dignity, safety, and connection**.*

2. How soon should therapy start after a stroke?

Ideally, therapy should begin as soon as the person is medically stable — the earlier, the better.

Early Occupational Therapy helps prevent stiffness, improves movement, and retrains the brain to do daily tasks again (like dressing, writing, or eating).

Even if the stroke happened months or years ago, therapy can still make a difference in regaining function and confidence.

3. How does Occupational Therapy support mental health recovery?

Occupational Therapy helps individuals rebuild **structure, purpose, and balance** in daily life after mental health challenges such as depression, anxiety, or schizophrenia.

We focus on:

- Creating healthy daily routines
- Building concentration and motivation
- Developing coping skills and emotional regulation
- Reconnecting with work, study, and meaningful roles
It's not just about feeling better — it's about **living better**, one day and one routine at a time.

4. Do you provide home or tele-sessions?

Yes. Therapy can be done **in-clinic, at home, or online** depending on your needs.

Home visits are great for clients who need help in their own environment, while online sessions are convenient for those living outside Goa or with busy schedules.

Whichever format you choose, your therapy plan will be **personalized, structured, and supported** every step of the way.

8. Testimonials

“Pallavi is an exceptional therapist, committed to the wellbeing of her clients.

She goes above and beyond to create holistic interventions.” – Shruti Nikhil

“Very happy and satisfied with the therapy session for my father... Dr. Pallavi is the best I found after many attempts.” – Xavier Alphonso

“Therapy with Pallavi helped me regain focus, structure, and peace of mind after my recovery phase from schizophrenia.” – Nisheal Kale

9. Legal / Policy Section

Privacy & Confidentiality Policy

All client information shared at Rehab Essence is confidential and used solely for therapeutic purposes. Personal data, session notes, and reports are securely stored and never disclosed without written consent, except where required by law.

Cancellation / Rescheduling Policy

*Appointments can be rescheduled with **24 hours’ notice**. Missed sessions or late cancellations may be charged to ensure fair scheduling for all clients.*

Credentials & Licensing

*All therapy sessions are conducted by **qualified and registered Occupational Therapists**, trained in physical, neurological, and mental health rehabilitation under ethical professional standards.*

Consent for Therapy Policy

Before beginning therapy, clients (or guardians) will receive a detailed explanation of goals, methods, and confidentiality. Informed consent is obtained to promote transparency, safety, and collaborative healing.
